The bathroom and wet room specialist wedi is further expanding its Top Line. The new products combine creative design with longevity - ideal for renovations and modernisations.

The Fundo Ligno Plus is a flush-to-floor shower element developed especially for suspended timber floors. Thanks to its outer-edge thickness of 23 mm, it can be quickly and easily integrated into the existing wooden layer without laborious levelling measures.

## Ready-to-install and seamless: wedi continues to expand its range of design surfaces

Easy to clean and installed in no time: matching Fundo Top surfaces for the Fundo Integro and Riolito shower elements.

The Fundo Top Riolito is the first and only wedi design surface for linear drainage with a counter-slope.

The illuminated Sanwell Top LED niche is also new in the Top Line. Thanks to the fully assembled lighting technology, it can be installed without milling, fastening, gluing or sealing. The precisely designed LED light strip is "made in Germany", corresponds to protection class IP67, and with its 'plug and play' technology, its installation is straightforward and quick.
